Intro to Networking Workshop instructions - Alec Ridgway
10/11/2019

Times up, let's do this

On your Computer, open up Wireshark

Once in Wireshark select which traffic you'd like to look at

1. Let it run for a little bit as it captures traffic
2. Hit the **Stop Capture** command in the upper left
3. Just get used to what you're looking at
4. Filter traffic by some of the protocols you saw

Let's look for something a little more specific…
1. Start a new capture
   a. Don't save the old one
2. Go to https://www.uacyber.org/
3. Stop the current capture
4. Filter by http
5. Inspect the packets until you see the host as uacyber.org
6. Take note of the user agent section
   a. Try and figure out what that section means
